

Math, Music, & Science News

3/10/2025

Today in math, students had another visit from Eli the Estimating and Data Elephant. We talked about estimation and read Eli's estimation book. To estimate is to make a guess, however our guess must be a smart guess, based on what we already know. We estimated objects in jars and in our hands. After we estimated, we did actual counts to see how smart our guesses were.

In science today, students viewed x-rays and a skeleton to learn about the bones in our bodies. We learned the skull protects the brain, the ribcage protects the heart and lungs, and the spine hold the body up. We also discussed ways to protect our bones such as wearing protective gear, eating calcium rich foods, getting vitamin D, and exercising.

This will be a very exciting week in music class. We will learn about wind instruments, string instruments and percussion instruments. We will see and hear an actual violin, recorder, and tambourine. We will also receive our very own kazoos and learn how to play them. Get ready to hear your children play their kazoos when they get home. I'll bet you wish you had a new kazoo to play along with them!
