

Math, Music, & Science News

11/3/2025

In math today, we worked more with Paige the Position Pig. She introduced us to a book called *Rosie's Walk*. We heard many of our positional words in this book and even got to act out Rosie's walk with her, using our manipulative mat and a small marker. Finally, we retold Rosie's story with a cut and paste reader. Have us tell you all about *Rosie's Walk* and our positional words!

In science today, students learned about the primary colors, red, yellow, and blue. Students experimented mixing colors with paint. They mixed two primary colors to form new, secondary colors, green, orange, and purple. We read the story *Mix it Up!* by Herve' Tullet to review our learning.

This week, we will continue to work on our solfege syllables as we sharpen our ear training skills, not only with singing up and down the scale, but also, with skipping from one syllable to another; these skips are called "intervals". The most important work we will do in music class, however, is to practice the songs we will sing on Thursday for our very special VIP's and our songs for the December 7 worship service. Finally, we will begin to learn a new, super-fun singing game called "Bow-Wow-Wow".
